Subject: Deny Permits for Dewey-Burdock Uranium Mine

Dear EPA,

WE CANNOT DRINK POLLUTED WATER AND SURVIVE. Delivering dangerous chemicals into ground water is NOT a safe practice, there will surely be leaks, and that water supply will be lost forever.

The proposed uranium mine with disposal wells in the sacred Black Hills is in an area that is documented to have faults, fractures, breccia pipes, and over 7000 old boreholes that have not been properly plugged. It will be impossible to contain mining fluids or waste liquids, and contamination of groundwater resources is very likely.

I am also concerned that adequate oversight of the quality of liquid wastes pumped into the Minnelusa Formation through the proposed deep disposal wells will be inadequate, and groundwater is likely to be contaminated.

A full survey of cultural and historical sites is needed before mining or deep disposal is allowed. Cultural and historical sites must be protected.

The history of uranium mining indicates that uranium mining cannot be done without creating and leaving contamination. Groundwater has never been returned to its original condition at any In-Situ leach uranium mine in the U.S. These permits should not be issued until it can be demonstrated that groundwater resources will be protected.
